

WHITEPAPER

This document describes how RubeTON works. In the beginning it was just a blog about TON, computer science and cryptocurrency, but after a while I decided to mint a Rubeton jetton, so in total 10,000,000 jettons were minted and liquidity was placed on two DEXs: Ston.fi and DeDust.io.

It's an experiment with technology and social behavior, how tokens work and how we can implement them in our lives to make it better. With Rubetons you can learn new languages with groups of international speakers, play TON Memes games, earn free coins in Dirty Coins chat and many other things. You can seek a job at Rubeton Works, If you are into infosec you maybe interested in RubeTON Security

The goal of the project is to make all participants rich, share knowledge and learn together. Also creating such products as TON Coin Incubator and Investing fund.
